(54) Title: IMPROVEMENTS IN OR RELATING TO SPECTACLES

(57) Abstract: An improvement in or relating to spectacles comprising a frame (2) of a formable material, which is adaptable to a form desired and to glasses (4), which are to be fixed to said frame (2). Said frame (2) is made of a material, which in an unformed, original state is fixed to its form but soft and bendable, which after a change of temperature allows a fitting of the frame to an user's shape of the face and which after returning to a normal temperature level has fixed the frame (2) in position after the actual shape of the face at the same time as the frame (2) is somewhat bendable without losing its unique form, said frame (2) comprises attachments (3) for arched glasses (4) adjusted to the shape of an eye, said glasses are used for covering a major part of the user's visual field and are fixable into position by means of said attachments (3) on a predetermined distance from the frame (2) in obtaining a correct distance relative the eyes and eye lashes of an user.
